Mahalo to the Hawai`i Emergency Management Agency (HI-EMA), American Red Cross (ARC), and County of Maui for their help in obtaining the non-congregate shelter (NCS) dataset, which was used to report the number of people and households provided temporary housing through hotel units due to the devastating wildfires that occurred in Lahaina, Maui in August 2023. Mahalo to Tien Lum for his help with the geographic and data visualizations.

## Executive Summary

Ka Mana O Na Helu (KMNH) is the Collaborative Applicant and Homeless Management Information System (HMIS) Lead Agency for Bridging The Gap (BTG) Continuum of Care and is responsible for assisting with the implementation of the local Point-in-Time Count (PIT) and reporting the findings to BTG and the U.S. Department of Housing and Urban Development (HUD). KMNH has prepared this report to convey 2024 Point-in-Time Count results, and to compare this data to prior years. The official night of the 2024 PIT was Monday, January 22, 2024.

On Aug. 8, 2023, wind-driven wildfires tore through sections of the island of Maui. The most significantly impacted area was the historic district of Lahaina, where 101 fatalities were confirmed. In February 2024, the U.S. Fire Administration reported that the wildfires destroyed more than 2,200 structures and caused an estimated \$5.5 billion in damages. The wildfires were the fifth deadliest wildland fire in U.S. history and the worst natural disaster in Hawaii's history. Shortly after the wildfires, the federal government provided public assistance funding to the State of Hawaii to provide disaster-related, temporary congregate and non-congregate shelters (NCS) for survivors of the wildfires. These facilities were quickly established to meet the needs of the community based on the demonstrated need for shelter. NCS facilities used to support these shelter efforts included numerous Maui hotels, supplying temporary hotel units to thousands of households and individuals impacted by the wildfires.

Leading up to the PIT, HUD asserted that wildfire displaced households residing in congregate or NCS hotels on the night of the PIT were to be included in BTG's sheltered count. Although no congregate shelters remained operational as of the PIT date, there were many active NCS hotels. HUD maintained that disaster-impacted households were housed prior to the wildfires and would have no housing without temporary NCS, thus should be considered homeless and counted under the emergency shelter project type. To ensure that these households were counted, KMNH was able to obtain the active NCS listing as of the PIT night from the American Red Cross (ARC), with much appreciated assistance from the Hawai'i Emergency Management Agency (HI-EMA) and County of Maui. NCS aggregate data is included in the BTG Summary, Maui Summary, and HUD HDX Reporting Tables of this report. The NCS dataset provided by ARC did not include disability or veteran status data, which is why the NCS columns of HDX reporting Tables 4, 7, and 8 are listed as not applicable.

Throughout other sections of this report, including the Executive Summary paragraphs that follow, statistics and methodology presented generally exclude NCS data so that PIT data from prior years can be more easily compared. In summary, NCS data added 2,328 households and 5,245 total people to BTG's total sheltered count of 619 people.

This report presents a detailed view of regional homelessness, including demographic information and county profiles of homelessness by sub-population for the rural counties of Hawai'i, Kaua'i, and Maui. The goal of this report is to inform the community at large, elected officials, government agencies, and other stakeholders of the immediate homeless situation on the neighbor islands. This report provides comprehensive data to promote informed decision-making for future funding activities, local strategic planning efforts, capacity building, and

program development within BTG. Findings from the local PIT effort should assist the federal, state, and county government in better understanding the extent and nature of homelessness.

Results from the 2024 PIT revealed a 14 percent decline in total one-day homelessness from 2,195 people in 2023 to 1,895 people in 2024. This 300-person reduction can be attributed to net decreases in the counties of Hawai'i and Maui, with Kaua'i realizing a net increase. Hawai'i and Maui counties attained 28 and 7 percent decreases in total homelessness respectively, driven largely by declines in unsheltered homelessness, while Kaua'i rose seven percent overall. Kaua'i's net increase of 35 people compared to 2023 resulted from a 34-person increase in unsheltered homelessness, and a one-person increase in sheltered homelessness.

The overall decrease in 2024 was fueled by a 17 percent drop in unsheltered homelessness to 1,276 persons compared to 1,542 in 2023. Unsheltered homelessness fell significantly in two of the three rural counties, with Hawai'i down 27 percent and Maui 26 percent. Kaua'i realized an eight percent increase in unsheltered homelessness, rising from 430 to 464 persons in 2024. The count of sheltered homeless persons staying in non-disaster related emergency or transitional facilities decreased five percent from 653 to 619 persons. This reduction resulted from an 87-person decline in shelter utilization on Hawai'i Island and a 53-person rise in shelter utilization reported in Maui and Kaua'i counties. Sheltered homelessness rose most in Maui, with a 52-person increase compared to 2023, Kaua'i, reported a slight increase of one-person. Final sheltered census data for Hawai'i, Kaua'i, and Maui on the night of the count showed 191, 59, and 369 total sheltered persons respectively.

An assessment of the type of individuals experiencing homelessness in 2024 found that of the 1,895 total persons enumerated, 1,418 were individuals, representing 75 percent of the total one-day estimate. Individuals are defined throughout this report as people in households (single or multiple adults) without children under the age of 18. A total of 477 family individuals within 133 families were homeless, including 43 families and 158 persons in these families that were living unsheltered. The 43 unsheltered families identified in 2024 represents a 16 percent decline relative to 2023. A total of 86 children were found living unsheltered within these 43 families, down 16 children compared to 2023. In 2024, 90 sheltered families were counted (84 in emergency shelters and six in transitional housing) encompassing 319 total persons, including 165 children and 154 adults. Sheltered family homelessness declined 22 percent to 90 families in 2024, down 25 families compared to 2023. The largest decrease in sheltered family homelessness was on Maui, which decreased by 16 families relative to 2023.

A review of BTG subpopulation data indicates that the total number of self-reported homeless veterans decreased 19 percent to 74 veterans compared to the 2023 total of 91. A total of 59 unsheltered veterans were counted in 2024, down 14 veterans relative to the 2023 count, and down 39 veterans relative to the 2020 count. An unsheltered count was not conducted in 2021 due to the COVID-19 pandemic.

Overall data from 2024 shows a 22-person decline in the level of chronic homelessness among individuals compared to 2023 data, with 674 homeless individuals demonstrating chronicity. This represents a three percent decline compared to the prior year and indicates that 48 percent of the 1,397 homeless individuals enumerated this year are chronically homeless. The chronic

homelessness data presented in this report is derived from self-reported responses to disability and length of homelessness questions. Twenty-one homeless individuals residing in transitional housing were excluded from this calculation since people residing in transitional housing cannot be chronically homeless. The rate of chronic homelessness is lower among individuals residing in emergency shelters and is 32 percent for 2024 (88 of 279 individuals).

This report tabulates data on unaccompanied and parenting youth households (see Appendix 2, Tables 5 and 6). Unaccompanied youth are defined by HUD as people in households without children who are not part of a family with children or accompanied by their parent or guardian during their homelessness, and who are all 24 years of age or younger. BTG reported 45 total unaccompanied youth households in 2024, with 34 of these households (76 percent) living unsheltered, while 11 resided in a sheltered facility. The 2024 unaccompanied youth household count increased by only two households compared to the 43 households reported in 2023. There were two unsheltered unaccompanied youth under the age of 18 reported in the 2024 count, both on Hawai'i Island.

A parenting youth household is defined by HUD as a household that contains only persons aged 24 years or younger with one or more dependent children. In 2024, BTG reported a total of nine parenting youth households with 32 total persons, including 17 children. The number of parenting youth households reported in 2024 decreased by two compared to 2023.

Given the numbers of homeless found in these counts and the state and federal initiatives to reduce homelessness, continued recommendations to improve the overall implementation of the count include the planning, supervision and execution of the count's efforts, the training of count staff and volunteers, the handling and verification of all survey forms and electronic data, and the introduction of data quality controls by outreach funders or the CoC.

Recently, FEMA approved a final 30-day extension of emergency NCS for fire survivors. The program is set to end on June 10, and has been running for nearly 10 months. While ARC continues to assist households in transition from the program, many families will continue to require high levels of assistance. The County of Maui and State of Hawaii should continue to consider and support local homeless services providers offering creative, cost-effective solutions to provide housing and support services to families impacted by the wildfires.

## Definition of Key Terms

Key terms used in this report are used for PIT reporting purposes. Definitions of these terms may differ in some ways from the definitions found in the Homeless Emergency Assistance and Rapid Transition to Housing (HEARTH) Act and in HUD regulations.

**Chronically Homeless (CH) Individual** refers to an individual with a disability who has been continuously homeless for one year or more or has experienced at least four episodes of homelessness in the last three years where the combined length of time homeless in those occasions is at least 12 months.

**Chronically Homeless (CH) People in Families** refers to people in families in which the head of household or other adult member has a disability and has either been continuously homeless for one year or more or has experienced at least four episodes of homelessness in the last three years where the combined length of time homeless in those occasions is at least 12 months.

**Continuum of Care (CoC)** is the local planning body responsible for coordinating the full range of homelessness services in a geographic area.

**Emergency Shelter (ES)** is a facility with the primary purpose of providing temporary, short-term shelter for homeless people.

**Family Individuals** are homeless as part of a household that has at least one adult (age 18 and older) and one child (under age 18).

**Homeless** describes a person who lacks a fixed, regular, and adequate nighttime residence.

**Homeless Management Information System (HMIS)** is the information system designated by the CoC to comply with the data collection requirements prescribed by HUD.

**Housing Inventory Count (HIC)** is produced by each CoC and provides an annual inventory of beds that assist people in the CoC who are experiencing homelessness or leaving homelessness.

**Individual** refers to a person who is not part of a family with children during an episode of homelessness. Individuals may be homeless as single adults, unaccompanied youth, or in multiple-adult or multiple-child households.

**Non-Congregate Shelter (NCS)** refers to disaster related temporary emergency shelter via hotel units that was provided to households impacted by the Maui wildfires.

**Other Permanent Housing** is housing with or without services that is specifically for formerly homeless people but that does not require people to have a disability.

**Parenting Youth** are people under age 25 who are the parents or legal guardians of one or more children (under age 18) who are present with or sleeping in the same place as that youth parent, where there is no person over age 24 in the household.

**Parenting Youth Household** is a household with at least one parenting youth and the child or children for whom the parenting youth is the parent or legal guardian.

**Point-in-Time Counts (PIT)** are unduplicated one-night estimates of sheltered and unsheltered homeless populations. The one-night counts are conducted by CoCs nationwide and occur during the last 10 days in January of each year.

**Permanent Supportive Housing (PSH)** is a housing model designed to provide housing assistance and supportive services on a long-term basis to formerly homeless people. HUD's Continuum of Care program, authorized by the McKinney-Vento Act, funds PSH and requires that the client have a disability for eligibility.

**Rapid Re-housing (RRH)** is a housing model designed to provide temporary housing assistance to people experiencing homelessness, moving them quickly out of homelessness and into permanent housing.

**Sheltered Homelessness** refers to people who are staying in emergency shelters or transitional housing programs.

**Transitional Housing (TH) Programs** provide people experiencing homelessness a place to stay combined with supportive services for a longer duration of time than emergency shelters.

**Unaccompanied Homeless Youth (under 18)** are people in households with only children who are not part of a family with children or accompanied by their parent or guardian during their episode of homelessness, and who are under the age of 18.

**Unaccompanied Homeless Youth (18-24)** are people in households without children who are not part of a family with children or accompanied by their parent or guardian during their episode of homelessness, and who are between the ages of 18 and 24.

**Unsheltered Homelessness** refers to people whose primary nighttime location is a public or private place not designated for, or ordinarily used as, regular sleeping accommodation for people (for example, the streets, vehicles, beaches, or parks).

**Veteran** refers to any person who served on active duty in the armed forces of the United States. This includes Reserves and National Guard members who were called up to active duty.

## Overview

The 2024 PIT represents the best available data to estimate one-day homelessness within the rural counties of Hawai'i, Maui, and Kaua'i on the night of January 22, 2024. The estimate adheres to the federal definition of homelessness which includes individuals and families residing in emergency shelters, transitional housing facilities, and persons identified as sleeping and living in an unsheltered location on the night of the count. The count is neither a measure of housing stability among people residing in housing nor a measure of the conditions of such housing and the general housing environment. HUD requires BTG to produce an unduplicated estimate of sheltered and unsheltered homelessness on a one-day point-in-time conducted during the last 10 days of January. The count is a one-day snapshot of homelessness.

In 2024, HUD required BTG to include disaster related NCS data under the emergency shelter project type. NCS hotel units were made available on a temporary basis in response to acute shelter demand due to the wildfires and thousands remained active as of the PIT. To ensure that these households and people were counted, KMNH was able to obtain the active NCS listing from ARC. NCS statistics augment HDX Tables 1, 3, 5, and 6 of Appendix 2, and summary tables providing more detail for each NCS facility supplement the BTG and Maui Summary report sections.

The main objective during this year's count was to obtain a reliable estimate of sheltered and unsheltered homeless individuals and families. The count helps to assess current levels of homelessness by household type, provide estimates for levels of veteran, chronic, unaccompanied youth, and parenting youth homelessness, and measure the prevalence of other underlying causes of homelessness such as mental health and substance use disabilities. Each year, PIT reporting is an integral part of local and national planning and serves to support policy and resource allocation decisions.

Excluding NCS facilities, BTG's Homeless Management Information System (HMIS) was utilized to extract most of the sheltered data needed for this report and continues to serve as the repository for the surveys collected during the unsheltered canvassing. The HMIS was used to count 551 of the 619 sheltered homeless (89 percent). The HMIS is a centralized database used to record services rendered to homeless individuals by homeless service providers throughout BTG. Service providers receiving federal, state, or county funding participate in the HMIS as required. Some privately funded agencies voluntarily use HMIS due to its reporting capabilities. NCS data related to the dataset provided by ARC was not entered into the HMIS for the purposes of this report, nor was it required to be by HUD.

To ensure that sheltered HMIS client and enrollment data was accurate, administrators contacted emergency and transitional shelter providers leading up to the count and confirmed that all clients sleeping in these facilities on the night of the count had active HMIS records. Five domestic violence shelters not participating in the HMIS were contacted individually and asked to complete a manual survey for each project. Sixty-eight of the 619 sheltered homeless (11 percent) were counted in this way.

For the unsheltered component of the PIT, BTG implemented a multi-day canvassing effort in 2024. This encompassed a multi-day physical count that occurred between Tuesday, January 23<sup>rd</sup> and Monday, January 29<sup>th</sup>. Field staff and volunteers asked all individuals appearing or known to be homeless during this period, “Where did you sleep this past Monday, January 22<sup>nd</sup>?” to help ensure that those counted were living in places not meant for human habitation on the night of the count. In 2024, Hawai`i Island continued to collect data on five descriptive questions on the Single and Head of Household surveys. These questions solicited information from respondents related to duration in Hawai`i, cause of homelessness, criminal history, emergency room utilization, and what services could be provided to assist in ending homelessness. Responses to these questions are detailed more extensively in the “Hawai`i Island Additional Unsheltered Questions” section of this report.

Unsheltered survey data was analyzed and used to create Tableau and ArcGIS dashboard data visualizations comparing PIT data since 2015. These dashboards are intended to accompany the tables presented in this report and can be found on the [BTG Website](#) under the Reports header.

The unsheltered survey form is largely based on HUD-defined data collection. Surveys collected during the count were reviewed for accuracy and completeness, entered in the PIT module of the HMIS, unduplicated, and analyzed to obtain the final statistics included in this report. Unsheltered survey forms along with other PIT resources can be accessed from the BTG website. The following unsheltered surveys were not included in the final unsheltered tally.

- Clients who reported living in a sheltered situation on the night of January 22, 2024.
- Duplicate surveys or records that were already counted in the sheltered component.

Stakeholders, regional leaders, homeless service providers, and volunteers attended several planning meetings and virtual training leading up to the PIT. The purpose was to convey the count’s methodology to all involved, provide background and instructions, and to answer any questions regarding the surveys and methodology used during the unsheltered count.

Field staff were composed of team members from service agencies that regularly perform outreach to unsheltered homeless individuals. Survey teams were assigned to familiar regions to ensure that many of the high-density areas frequented by unsheltered homeless were surveyed. Skilled outreach staff familiar with these geographic areas and known to individuals experiencing homelessness were more likely to obtain accurate information. Service-based locations, such as food pantries or drop-in centers were also covered extensively during the count to reach additional unsheltered homeless.

## BTG Summary

Table 1 summarizes sheltered, unsheltered, and total homelessness for BTG over the last seven years. An unsheltered count was not conducted in 2021 due to the COVID-19 pandemic. BTG received an exemption from HUD during this year and implemented only the sheltered count. Individual and family homelessness has been broken out within each component to highlight year-to-year differences between these population groups. Dashboards identifying trends in homelessness for BTG, and the rural counties can be viewed from the website link presented in the Overview section.

The 2024 PIT data shows a reduction in total homelessness, for both individuals and families. Sheltered homelessness decreased by 34 people to 619 in 2024. Unsheltered homelessness decreased by 266 people to 1,276 total persons.

**Table 1: BTG Summary, 2018-2024**

	2018	2019	2020	2021	2022	2023	2024
<b>Sheltered</b>	<b>705</b>	<b>758</b>	<b>706</b>	<b>636</b>	<b>628</b>	<b>653</b>	<b>619</b>

All Households	1,318	1,378	1,401	NA	1,456	1,599	1,455

Although not included in the table above, Maui’s emergency NCS data has been aggregated and is provided in Tables 2, 3, and 4 below. The first table provides a summary of all households and persons, while the second and third delineate data by family and individual household type, respectively. More detail in terms of demographic information is provided in the HDX tables of Appendix 2. None of the NCS households were chronically homeless by HUD standards, since all were housed prior to the Maui wildfires. Length of stay (LOS) can be interpreted as the number of hotel nights that have been made available based on hotel entry data provided in the

NCS dataset, and through the night of January 22, 2024. LOS per household and person are presented by hotel, along with total households and people. Multiplying corresponding columns provides some perspective as to the magnitude of temporary shelter assistance that has been provided to households impacted by the wildfires.

## BTG Homeless Subpopulations

BTG collected data on the subpopulations presented below in 2024. Table 5 highlights this data for BTG over the last seven years and delineates the data by project type. Sheltered statistics are broken out by emergency shelter and transitional housing project type. Results indicate reductions in the total homeless veterans, chronically homeless individuals, adults with serious mental illness, and adults with chronic substance use disorders.

**Table 5: BTG Homeless Subpopulations, 2018-2024**

## BTG Sheltered Projects Listing

Table 6 displays the full list of sheltered projects that contributed to the 619 sheltered homeless this year. These projects are sorted by county, project type, and name. Maui does not currently have sheltered projects classified under the transitional housing project type. The five domestic violence (DV) projects not participating in the HMIS accounted for 68 total individuals (11 percent of the total) and are italicized for reference.

## Length of Stay (LOS) Statistics for Sheltered HMIS Projects

Table 7 displays descriptive LOS statistics for the sheltered HMIS projects included in 2024. This table does not include LOS data for the five domestic violence projects not participating in the HMIS. Within the emergency shelter and transitional housing project types, projects are sorted by project name. LOS for each client is measured from project entry date through the PIT date. Data by project was then aggregated to produce the statistics presented below. Homeless services providers are encouraged to review LOS data in relation to overall HMIS data quality, since projects with many clients and high average LOS heavily influence BTG's system performance and tend to have less frequent bed and unit turnover.

## Hawai`i Island Summary

Table 8 summarizes the total number of sheltered and unsheltered homeless for Hawai`i Island over the last seven years. An unsheltered count was not conducted in 2021 due to the COVID-19 pandemic. The table presents sheltered, unsheltered, and total homelessness. Individual and family homelessness is broken out within each component to detail differences from year to year between these key population groups. Charts identifying trends in homelessness for Hawai`i Island can be viewed from the dashboards link presented in the Overview section.

PIT data for Hawai`i Island showed a decrease in total homelessness of 285 people, a reduction of 28 percent year-over-year. Sheltered homelessness decreased by 87 people, while unsheltered homelessness decreased by 198 people. The total number of homeless families was 41, fourteen fewer than in 2023. There were 30 sheltered families identified, 10 fewer than in 2023. Unsheltered family homelessness decreased by four families to 11 in 2024.

## Hawai`i Island Homeless Subpopulations

Hawai`i Island collected data on the subpopulations presented below in 2024. Table 9 highlights this data over the last seven years and delineates the data by project type. Sheltered statistics are broken out by emergency shelter and transitional housing project type. Results include a reduction in the total number of homeless veterans.

**Table 9: Hawai`i Island Homeless Subpopulations, 2018-2024**

## Hawai'i Island Unsheltered Homelessness

Tables 10 and 11 present data on Hawai'i Island unsheltered homelessness over the last seven years. Data represents unsheltered responses to the survey question “Where did you sleep the night of Monday, Jan 22, 2024?”. The nine unsheltered regions have remained consistent over the years presented and the regional map can be found in Appendix 1. Table 10 highlights differences in total people, while Table 11 outlines differences in households. Among all people, unsheltered homelessness declined 27 percent year-over-year, with the largest numerical decrease in the North Kona region. Total households decreased by 169 compared to 2023, with large percentage declines in both family and individual households. Unsheltered family households decreased by four households, or 27 percent. Over the seven-year period presented, there has been an 85 percent reduction in the number of unsheltered family households.

## Hawai`i Island Additional Unsheltered Questions

In 2024, Hawai`i Island collected data on five additional questions through its unsheltered canvassing efforts. The following questions were included on the Single and Head of Household survey forms and were only administered on Hawai`i Island.

- *Did you move to Hawai`i within the past year?*
- *What led to your current living situation?*
- *Have you been arrested in the last year?*
- *How many times have you been to the emergency room in the past year?*
- *What can we do to help you end your homelessness?*

Table 12 presents response data from the question “*Did you Move to Hawai`i within the past year?*”. Of the 492 households surveyed, 481 responded (98%), and 37 of the 481 (8%) stated that they had moved to Hawai`i within the past year. Only one of the 37 “yes” responses came from family households, while the remaining 36 came from individual households. Tables 13 through 15 present data for households responding “yes” to this question.

**Table 12: Did you move to Hawai`i within the past year?**

	Fam HH	Individual HH	Total
Yes	1	36	37
No	10	434	444
Unknown/Refused		11	11
<b>Total</b>	<b>11</b>	<b>481</b>	<b>492</b>

**Table 13: If yes, what State or Country did you come from?**

	Fam HH	Individual HH	Total

Afghanistan		1	1

Japan		2	2
Marshall Islands	1		1
Mexico		1	1
<b>Total Households</b>	<b>1</b>	<b>36</b>	<b>37</b>

Of the 37 households that moved to Hawai`i within the past year, 32 came from states, while five moved from a foreign country. Of the 32 state responses, the most came from California.

Seven of the 37 households (19%) that reported moving to Hawai`i within the past year indicated that they would be interested in returning home. This data is presented in the following table.

**Table 14: If yes, are you interested in returning home?**

	Fam HH	Individual HH	Total
Yes		7	7
No	1	29	30
<b>Total</b>	<b>1</b>	<b>36</b>	<b>37</b>

For the 37 households that arrived within the last year, Table 15 displays data on why they moved to Hawai`i.

**Table 15: If yes, why did you come to Hawai`i?**

	Fam HH	Individual HH	Total
Came for work/trade living arrangement		8	8
Came for the weather		8	8
To be with family or friends and it didn't work out	1	5	6
Other reason		15	15
<b>Total</b>	<b>1</b>	<b>36</b>	<b>37</b>

Table 16 presents data from the survey question “*What led to your current living situation?*”. This question allowed for only one selection, intended to be the primary reason that each household was living unsheltered. Of the 492 households surveyed, all households responded. Apart from “Other” responses, the most prevalent responses were “Family/Relationship Conflict”, followed by “Unable to afford rent”. These two reasons comprised 42 percent of the total (206 of 492 responses).

**Table 16: What led to your current living situation?**

Primary Reason	Fam HH	Ind HH	Total	% of Total
COVID-19		15	15	3.0%
Disability (mental/addiction/physical)		64	64	13.0%
Evicted from my home	2	45	47	9.6%

Recently released from incarceration		3	3	0.6%
Unable to afford rent	4	87	91	18.5%
Unable to secure affordable housing		13	13	2.6%
Other reason	1	102	103	20.9%
<b>Total</b>	<b>11</b>	<b>481</b>	<b>492</b>	<b>100.0%</b>

Table 17 presents response data from the question “*Have you been arrested in the last year?*” Of the 492 households surveyed, 478 responded (97%), with 119 of the 478 (25%) stating that they had been arrested in the last year. In terms of individual households, 119 of the 468 responding (25%) indicated that they had been arrested in the last year. Tables 18 and 19 present data for households responding “yes” to the question noted above. Table 18 groups the response data into three categories, as this conditional question was not categorized on the survey forms. Table 20 presents data from the survey question “*How many times have you been to the emergency room in the past year?*”.

**Table 17: Have you been arrested in the last year?**

<b>Total</b>	<b>11</b>	<b>481</b>	<b>492</b>

Table 21 presents data from the survey question “*What can we do to help you end your homelessness?*”. This question allowed for multiple response selections intended to convey data on what services can be provided to assist in resolving the household’s unsheltered homelessness. The percentage of total for each homeless service line is based on 492 total

households. “Securing housing”, and “Money/Rent assistance” were the top two responses. Replacing lost or stolen documents came in third at 44%. All households picked at least one response from the options below.

**Table 21: What can we do to help you end your homelessness?**

<b>Homeless Service</b>	<b>Fam HH</b>	<b>Ind HH</b>	<b>Total</b>	<b>% of HHs</b>
Childcare	0	3	3	0.6%
Documents (Replace lost/stolen)	5	213	218	44.3%

Other reason	3	75	78	15.9%

## Kaua`i Summary

Table 22 summarizes the total number of sheltered and unsheltered homeless for Kaua`i over the last seven years. An unsheltered count was not conducted in 2021 due to the COVID-19 pandemic. The table presents sheltered, unsheltered, and total homelessness. Individual and family homelessness is broken out within each component to detail differences from year to year between these key population groups. Charts identifying trends in homelessness for Kaua`i can be viewed from the dashboards link presented in the Overview section.

Sheltered homelessness remained steady year-over-year and increased by only one person compared to 2023. The total number of sheltered households rose by five to 32 this year. Unsheltered homelessness increased eight percent to 464 total people year-over-year. Unsheltered homelessness among family individuals decreased slightly to 94 people, however, was offset by an increase in the number of unsheltered individuals, up by 36 people compared to 2023.

## Kaua`i Homeless Subpopulations

Kaua`i collected data on the subpopulations presented below in 2024. Table 23 highlights this data over the last seven years and delineates the data by project type. Sheltered statistics are broken out by emergency shelter and transitional housing project type. Results include a reduction in the total number of chronically homeless individuals.

**Table 23: Kaua`i Homeless Subpopulations, 2018-2024**

## Kaua`i Unsheltered Homelessness

Tables 24 and 25 present data on Kaua`i unsheltered homelessness over the last seven years. Data represents unsheltered responses to the survey question “Where did you sleep the night of Monday, Jan 22, 2024?”. The five unsheltered regions listed have remained consistent over the years presented and the regional map can be found in Appendix 1. Individual and family homelessness is broken out in both tables to detail differences from year to year between these population groups, however, Table 24 highlights total people, while Table 25 presents households. Among all people, unsheltered homelessness rose eight percent compared to last year, with the largest numerical increase in the South Central region. The total number of households increased by 30 compared to 2023, fueled by an increase of 35 individual households. There was a decline in family homelessness of five families over this same period.

## Maui Summary

Table 26 summarizes the total number of sheltered and unsheltered homeless for Maui over the last seven years. An unsheltered count was not conducted in 2021 due to the COVID-19 pandemic. The table presents sheltered, unsheltered, and total homelessness. Individual and family homelessness is broken out within each component to detail differences from year to year between these key population groups. Dashboards identifying trends in homelessness for Maui can be viewed from the link presented in the Overview section.

Maui’s sheltered homelessness increased by 52 people, up 16 percent year over year, however, was greatly impacted by the Lahaina wildfires. Ka Hale A Ke Ola’s Westside shelter, which operated in Lahaina for many years, burned down in the fires leading many of the households to transition to its Central facility. The State, in partnership with nonprofit Project Vision Hawai‘i, opened Pu`uhonua o Nēnē, a temporary shelter for Maui wildfire survivors who were experiencing homelessness before the disaster. This temp shelter opened on September 29, 2023.

Unsheltered homelessness decreased 26 percent to 285 total people compared to the 387 that were counted one year prior. Unsheltered homelessness among individuals decreased by 96 people compared to 2023, while the level of unsheltered families increased by one. The total number of homeless families counted was 59, down 20 percent compared to 2023. The net reduction of 15 total families resulted from a 16-family decrease within the sheltered component and one additional family in the unsheltered component.

## Maui Non-Congregate Shelter (NCS) Summary

Although not included in the table above, Maui’s emergency NCS data has been aggregated and is provided in Tables 27, 28, and 29 below. These tables replicate those found in the BTG Summary section. The first table provides a summary of all households and persons, while the second and third delineate data by family and individual household type, respectively. Length of stay (LOS) can be interpreted as the number of hotel nights that have been made available based on hotel entry data provided in the NCS dataset, and through the night of January 22, 2024. LOS per household and person are presented by hotel, along with total households and people. Multiplying corresponding columns provides some perspective as to the magnitude of temporary shelter assistance that has been provided to households impacted by the wildfires.

**Table 27: Maui Non-Congregate Shelter Summary, All Households**

## Maui Homeless Subpopulations

Maui collected data on the subpopulations presented below in 2024. Table 30 highlights this data over the last seven years and delineates the data by project type. Sheltered statistics are broken out by emergency and transitional housing project type. Results include reductions in the total number of veterans, chronically homeless individuals, adults with serious mental illness, and adults with chronic substance use issues. Maui did not have projects classified as transitional housing in 2024.

## Maui Unsheltered Homelessness

Tables 31 and 32 present data on Maui unsheltered homeless over the last seven years. The six unsheltered regions listed have remained consistent over the years presented and the regional map can be found in Appendix 1. Individual and family homelessness is broken out in both tables to detail differences from year to year between these population groups, however, Table 31 highlights differences in total persons, while Table 32 displays differences in households. Among all people, unsheltered homelessness declined 26 percent compared to last year, with the largest numerical decrease in the Central Maui region. Maui realized a net household reduction of 20 percent, or 61 households compared to 2023, with individual households declining by 62. There were reductions in the total number of households counted in four of the five applicable regions.

## Unsheltered Error Estimates and Outreach Coverage

Table 33 provides an estimate for the number of clients that were missed in this year’s unsheltered canvassing by county and for BTG. There was a total of 503 distinct clients active in BTG’s HMIS Street Outreach projects as of the PIT date. Of these clients, 379 were surveyed in the unsheltered count this year. Assuming all 503 clients were unsheltered as of the PIT date, this implies that 124 clients were missed, and that the unsheltered count’s true number should be at least 1,400, nearly ten percent higher than the 1,276 reported. This highlights the importance of reviewing street outreach project client rosters leading up to the count and including organizations with active street outreach clients in the count’s implementation for the region(s) that they provide outreach services. Data for each county contributing to BTG’s total is provided in the table below. Hawai`i Island had the highest rate of active HMIS clients found in this year’s count at 90 percent, however, also had the lowest number of clients active in its HMIS outreach projects, with 104. Kaua`i and Maui found 80 and 64 percent of their active outreach clients respectively.

The table also displays a breakdown of the 1,276 clients identified in the unsheltered count. Of the 1,276 unsheltered clients, 897 or 70 percent were not actively enrolled in an HMIS street outreach project as of the PIT date, implying that only 379 clients were actively enrolled and receiving outreach services. Of the three counties, Maui had the highest rate of enrollment for people encountered during the count, with 45 percent of the people surveyed receiving services through HMIS street outreach projects. Hawai`i Island had the lowest at 18 percent. Given the volume of unsheltered homeless people found this year and the county, state, and federal initiatives to reduce unsheltered homelessness, ongoing recommendations include increasing street outreach funding to expand outreach personnel and fill gaps in service delivery, and augmenting housing focused outreach services in alignment with BTG policies and procedures.

**Table 33: Active HMIS Outreach Clients vs. Clients Identified in the Unsheltered PIT**

	Hawai`i	Kaua`i	Maui	BTG
Unduplicated clients in HMIS outreach projects, 1/22/24	104	196	203	503
